

Location 1: Dry flat land

Water:

There are 2 wells but in general there is not much water available. Getting the water out of the ground takes a lot of energy.

Building material:

There is not a lot of wood available but there are stones and sand to make bricks. There is also an iron mine.

Soil quality:

The soil is very dry and therefore difficult to plant on. It would need a lot of water to be suitable for plants.

Animals:

The land is very suitable for a certain type of cows, goats and chicken.

Climate:

It is a hot place, with little rainfall. Because it is very open, there is a lot of strong winds. As there is little rainfall, the sky is usually clear which means that there the amount of hours of sun is very high.

Space available:

The land is flat and there are no natural obstacles, which means that there is a lot of space available. There is about 50km² of land available.

Location 2: Northern mountain land

Water:

This location is next to a lake, so there is a lot of water available.

Building material:

There are a lot of pine trees, which can be used as building material.
There is also stone available.

Soil quality:

The soil is fairly fertile, but contains a lot of stones. In the winter the soil can freeze which means that it cannot be used for planting during the winter season. Also, as the location is in the mountains, there are not many flat pieces of land.

Animals:

There is some grassland for cows, but not a lot. Goats are very well adapted to the mountains. Chicken would also be able to live in this environment.

Climate:

The location has 4 season, with cold winters and warm but not very hot summers. The precipitation rate is average, as is the amount of sun hours. As this location is high up in the mountains, the nights can get very cold. It is usually not very windy.

Space available:

Because of the mountains, there are not so many flat pieces of land available. There is about 30km² of land available.

Location 3: Rocky Beach

Water:

This location is next to the sea, so there is a lot of water but it is all salty water.

Building material:

There are a lot of rocks available and sand which can be made into cement. Trees are available but only small trees that can live in the sandy soil.

Soil quality:

The soil is very sandy and not very fertile. Only certain plants that are adjusted to the sandy soil are able to grow on this soil.

Animals:

There is no grazing land for cattle, only goats can eat the available plants. There is however an abundance of fish as it is located right next to the sea.

Climate:

There are 4 seasons in this place. It can get hot in the summer, but temperatures never get very extreme as it has a sea climate. The precipitation rate is average. The amount of sun hours is quite high. It is usually fairly windy.

Space available:

There are not many natural obstacles except for the sea, therefore there is a lot of space available. There is about 40km² of land available.

Location 4: Wetland

Water:

This location is a wetland. There is plenty of fresh, drinkable water the whole year around, even in summer.

Building material:

The clay of the wetland is very suitable to build bricks out of. There is also some wood available.

Soil quality:

The soil is very fertile, but also very wet. In most places it is not solid enough to build on without any measures.

Animals:

The grass is very suitable for keeping cows and sheep. It would also be possible to keep chicken.

Climate:

There are 4 seasons in this place. In summer it is warm but not very hot, in winter it is cold but not very cold. The precipitation rate varies during the year, but is fairly high. Especially in autumn and winter it rains a lot. The amount of sun hours is not very high, as it is often cloudy. It is usually fairly windy.

Space available:

There are not many natural obstacles, therefore there is a lot of space available. However, some parts are very wet and would therefore need to be processed before they can be used to build on. There is about 40km² of land available.
